

EMPYREAN MEDIREACH

AI-Powered Healthcare for the Underserved World

Reach the Unreached. Treat the Untreated.

THE PROBLEM

4.5B

People lack adequate
healthcare access

1B+

Live in areas with
zero specialist coverage

8M

Preventable deaths
each year in LMICs

60%

Delayed treatment due to
no triage guidance

Rural and underserved communities in the Global South face a critical gap — no diagnosis, no triage, no pathway to care.

OUR SOLUTION

Empyrean MediReach is an AI-powered triage and diagnostic platform built for first responders, rural clinics, and mobile ambulances — works offline, speaks local languages.

AI Symptom Assessment

Multilingual NLP engine diagnoses symptoms and recommends first aid protocols — no internet required.

Smart Routing

Instantly locates nearest doctor, clinic, hospital or specialist with turn-by-turn navigation.

Offline-First Mobile

Runs on low-cost Android devices with 2G fallback. NVIDIA Jetson edge AI for advanced clinics.

Ambulance Integration

Real-time coordination between mobile units and A&E departments to prepare for incoming patients.

Diagnostics Guidance

Step-by-step lab test recommendations tailored to available resources at point of care.

Specialist Escalation

Automated referral pathway with contact details and full patient summary for receiving physician.

HOW IT WORKS

1

Patient Presents

Symptoms entered by community health worker or patient via voice, text, or image.

2

AI Triage

On-device NVIDIA Jetson AI model analyses symptoms against clinical knowledge base.

3

Diagnosis & Protocol

Generates probable diagnosis, severity score, and immediate first-aid instructions.

4

Action Plan

Routes to nearest facility, dispatches ambulance, or escalates to remote specialist.

All steps can run fully offline. Cloud sync when connectivity available.

TARGET MARKET — THE GLOBAL SOUTH

Sub-Saharan Africa

1.4B people, 2.3 doctors per 10,000

TAM

\$85B

Global digital health, LMICs

South & Southeast Asia

2.1B people, rural healthcare gap

SAM

\$18B

Rural & primary care AI tools

Latin America

650M people, fragmented rural care

SOM

\$2.4B

5-year addressable target

PRIMARY USERS: Community Health Workers • Mobile Ambulance Teams • Rural Clinic Staff • A&E Departments

TECHNOLOGY STACK & NVIDIA PARTNERSHIP

NVIDIA Jetson Edge AI

On-device inference at rural clinics and ambulances. Ultra-low power, no cloud dependency. Runs diagnostic models locally.

NVIDIA NIM Microservices

Scalable cloud inference at regional health hubs for complex multi-modal diagnostics and population-level analytics.

NVIDIA BioNeMo

Clinical NLP model training on low-resource, multilingual datasets covering 40+ African and Asian languages.

Offline-First Architecture

SQLite on-device + delta sync. Works on 2G/SMS. Full functionality with zero internet access.

Actively applying for NVIDIA Inception Programme and NVIDIA for Healthcare partnerships

COMPETITIVE DIFFERENTIATORS

Feature	Empyrean MediReach	Telemedicine Apps	Hospital EMRs	NGO Programs
Offline Operation	✓ Full	✗ None	✗ None	Partial
AI Triage Engine	✓ Advanced	Basic	✗ None	✗ None
Route to Care	✓ Auto	Manual	✗ None	Manual
Multilingual NLP	40+ langs	5-10 langs	✗ None	Varies
Low-cost Devices	✓ \$50+	Smartphone	Desktop	Paper-based
Ambulance Coord.	✓ Real-time	✗ None	Limited	✗ None

Our offline-first, multilingual, end-to-end care pathway has no direct competitor in the Global South.

BUSINESS MODEL

B2G Licensing

Government ministry contracts for national community health worker networks. Per-seat SaaS pricing.

**\$3–8 per
user/month**

B2B Hospital & NGO

Licensing to rural hospital chains, NGOs, and humanitarian organisations deploying at scale.

**\$500–2,000
per site/month**

Freemium Consumer

Free basic triage app for citizens. Premium AI-assisted diagnostics, telemedicine connections and follow-ups.

**\$2–5 per
user/month**

Data & Insights

Anonymised population health analytics sold to pharma, NGOs, and WHO for outbreak monitoring.

**Custom
enterprise deals**

TRACTION & ROADMAP

CURRENT TRACTION

MVP built — AI triage engine prototype in progress

Plan to sign MOU with 2 NGOs in India

500 health workers surveyed — 91% intent to use

NVIDIA Inception application in progress

Q1–Q2 2026

Pilot Deployments

500 CHWs in Kenya and Bangladesh. Refine AI model with real data.

Q3–Q4 2026

Series A & Expansion

Raise \$1M. Launch India, Indonesia markets.

2027

Scale to 250k Users

Ministry partnerships in 5 countries. Ambulance network integration.

2028+

Full Platform

Diagnostics devices, wearables integration, WHO data partnerships.

FINANCIAL PROJECTIONS

Annual Recurring Revenue (\$M)

Projections assume 2 ministry contracts by 2026 and organic CHW network growth.

Seed Round

THE TEAM

Manny Anguluri

CEO & Co-Founder

Computer Architect, 18 yrs in various sectors. Founder and passionate charity volunteer.

Beth Anguluri

CTO & Co-Founder

Medical professional, qualified pediatric nurse and first aid practitioner.

Researchers and Industry experts

Former logistics directors and Sales managers. Proven Scaled operations in multiple countries.

Doctors at Yashoda

Chief Medical Officers

Global health researchers, Osmania Medical School. Expert in point-of-care diagnostics.

EMPYREAN MEDIREACH

Join us in building the healthcare infrastructure the Global South deserves.

WE ARE RAISING

\$1.5M Seed Round

Pre-product, post-LOI. 18 months runway to first paying ministry contract.

Reach the Unreached. Treat the Untreated.
